

PROCEEDINGS

OF THE

ZOOLOGICAL SOCIETY

OF LONDON.

PART XIX.

1851.

PRINTED FOR THE SOCIETY;
SOLD AT THEIR HOUSE IN HANOVER SQUARE,
AND BY MESSRS. LONGMAN, BROWN, GREEN, AND LONGMANS,
PATERNOSTER ROW.

13. DESCRIPTIONS OF FORTY-THREE NEW SPECIES OF CYCLOSTOMACEA, FROM THE COLLECTION OF HUGH CUMING, ESQ.
BY DR. L. PFEIFFER.

Cyclostoma himalayanum, Pfr. *C. testá umbilicatá, globoso-turbinatá, solidulá, costis spiralibus obtusis, 10-12, lineisque interjacentibus obsoletis sculptá, sub epidermide deciduá, . . . albida; spirá turbinatá, supernè rufa, acutiuscula; anfractibus 5, convexiusculis, ultimo ventro, circa umbilicum angustum, infundibuliformem vix compresso; aperturá subverticali, circulari; peristomate simplice, continuo, breviter adnato, fusco-igneo, subincrassato, breviter expanso, supernè subangulato.*—*Oberculum?*

Diam. maj. 48, min. 39, alt. 35 mill.

Hab. in Himalayâ.

Cyclostoma euchilum, Pfr. *C. testá umbilicatá, turbinato-subglobosá, solidulá, obliquè confertim striatá, lineis impressis distantioribus obsoletè clathratulá, albida, violaceo-fusco et fulvo variegatá, parum nitida; spirá turbinato-elevatá, apice acutiusculá; anfractibus 5½, convexis, ultimo rotundato, ad suturam subdepresso, medio albo-fasciato, basi confertim et valide spirali-ter sulcato; umbilico mediocri, infundibuliformi; aperturá vix obliqua, subangulato-circulari, intus purpurascenti-carneo-micante; peristomate subcontinuo, albo, marginibus supernè dilatatis, callo subemarginato junctis, dextro et basali latissimis, fornicatim revolutis, sinistro angustato, vix reflexo.*—*Oberculum?*

Diam. maj. 43, min. 32, alt. 28 mill.

Hab. Madagascar.

Cyclostoma crassum, Pfr. *C. testá umbilicatá, turbinato-globosá, crassá, striatá et minutè malleatá, rubello-fulvá, fasciis et lineis interruptis castaneis ornata; spirá turbinatá, obtusiusculá; anfractibus 5, convexis, ultimo supernè turgido, infra medium cariná funiformi et fasciá latiore nigricante circumdato, basi subplanulato, circa umbilicum angustum, infundibuliformem subcompresso; aperturá obliqua, subangulato-rotundata, intus rubella; peristomate duplice: interno continuo, externo crasso, expanso, ad anfractum penultimum breviter interrupto.*—*Oberculum?*

Diam. maj. 27, min. 23, alt. 18 mill.

Hab. Liew Kiew, et var. minor in insulâ Ibyat (Bashee group).

Cyclostoma expansum, Pfr. *C. testá umbilicatá, turbinato-subglobosá, solidiuscula, spiraliter confertim striatá, opacá, supernè castaneo et albido variegatá; spirá conoides, apice acutiuscula; anfractibus 5, convexiusculis, ultimo convexiore, dilatato, peripherid subcarinato, basi fasciis angustis castaneis ornata; umbilico angusto, pervio; aperturá subverticali, ferè circulari; peristomate subsimplice, continuo, breviter adnato, pallide aurantiaco, undique æqualiter angulatum plano-expanso, margine subrevoluto.*—*Oberculum?*

Diam. maj. 30, min. 22, alt. 19 mill.

Hab. —?

5. **CYCLOSTOMA UNICOLOR**, Pfr. *C. testā umbilicatā, globoso-conicā, solidā, longitudinaliter confertissime et regulariter striatā, spiraliter confertim sulcatā, opacā, fulvido-stramineā; spirid conicā, subtruncatā; anfractibus 6, convexiusculis, ultimo supernē et medio acutē carinato: carinā tertid, validissimā, circa umbilicum angustum, infundibuliformem, intus profundē spiraliter sulcatum; aperturā parum obliquā, angulato-circulari; peristomate simple, marginibus callo lunatim exciso junctis, dextro expansiusculo, sinistro medio dilatato, patente.*—*Oberculum?*

Diam. maj. 20, min. 17, alt. 16 mill.

β . *Majus, striis longitudinalibus obsoletioribus, albidum.*

Diam. maj. 28, min. 22, alt. 20 mill.

Hab. —?

6. **CYCLOSTOMA PONDEROSUM**, Pfr. *C. testā latē umbilicatā, conoideo-depressā, crassā, ponderosā, subtiliter et obliquē malleato-rugulosa, olivaceo-fuscula; spirā breviter conoidea, obtusa; anfractibus 5, parum convexis, celeriter accrescentibus, ultimo lato, subdepresso, ad peripheriam obtusē funiculato-carinato; apertura obliquā, angulato-ovali, intus alba, nitida; peristomate crasso, recto, subcontinuo, supernē angulato-dilatato, margine columellari perarciuato.*—*Oberculum membranaceum, pellucidum, fuscum, arctispirum.*

Diam. maj. 36, min. 30, alt. 20 mill.

Hab. Guatemala.

7. **CYCLOSTOMA DYSONI**, Pfr. *C. testā umbilicatā, conoideo-orbiculatā, solidā, pliculis confertis undulatis, subconfluentibus sculptā, fusco-olivacea, pallidius strigata et obsoletē fasciatā; spirid conoidea, obtusula; anfractibus $4\frac{1}{2}$, convexiusculis, celeriter accrescentibus, ultimo rotundato; umbilico mediocri, conico; aperturā ferè verticali, angulato-subcirculari, intus cæruleamente, nitida; peristomate simple, recto, supernē angulato, breviter adnato, margine dextro declivi, columellari subdilatato-patente.*—*Oberculum?*

Diam. maj. 27, min. 22, alt. 16 mill.

Hab. Honduras (Mr. Dyson).

8. **CYCLOSTOMA DISCUS**, Pfr. *C. testā umbilicatā, depressā, discoidea, solidiuscula, nitida, alabastrina; spirid planissimā; anfractibus vix 4, convexiusculis, ad suturam impressam striatis, ultimo teretiusculo, subdepresso, in umbilico lato distinctius striato, anticē brevissimē soluto; aperturā subverticali, circulari; peristomate continuo, simple, recto.*—*Oberculum?*

Diam. maj. 14, min. 11, alt. 5 mill.

Hab. —?

9. **CYCLOSTOMA DESCISCENS**, Pfr. *C. testā latē umbilicatā, depresso-semiglobosa, supernē confertim sulculata, albida; spirid convexa; anfractibus $4\frac{1}{2}$, convexiusculis, ultimo terete, anticē subito deflexo, basi lœvigate; apertura ferè horizontali, lunato-*

rotundata, intus albâ; peristome incassato, marginibus remotis, callo junctis, basali reflexo, columellari subito arcuatim ascende.

—*Operculum?*

Diam. maj. 10, min. $8\frac{1}{2}$, alt. $5\frac{1}{2}$ mill.

Hab. Socotra.

10. **CYCLOSTOMA MARGARITA**, Pfr. *C. testa perforata, globoso-conicâ, solidulâ, lævigatâ, nitidulâ, rubello-succined; spirâ conicâ, apice acutiusculâ, sanguined; anfractibus 5, convexiusculis, ultimo subrotundato; aperturâ parum obliquâ, ovali; peristome interrupto, simplice, recto, margine columellari perarcuato, subincrasata.—Operculum?*

Diam. maj. 7, min. 6, alt. 6 mill.

Hab. in insulâ Rapâ Oceani pacifici.

82 1953.

11. **CYCLOSTOMA (LEPTOPOMA) LATELIMBATUM**, Pfr. *C. testa perforata, globoso-conicâ, tenui, minutè spiraliter striata et lineis obtusis elevatis, subaequidistantibus cinctâ, diaphanâ, parum nitida, albâ, maculis et fasciis pallidè fulvis variegatâ; spirâ turbinatâ, acutiusculâ; anfractibus 5, convexiusculis, ultimo rotunduto, medio linea acutè elevata subcarinato; umbilico angusto, vix pervio; aperturâ obliquâ, subcirculari; peristomate duplice, albo: interna interrupto, breviter porrecto, marginibus callo tenui junctis, externo undique æqualiter dilatato, angulatim patente, supra perforationem excisa.—Operculum?*

Diam. maj. 17, min. 13, alt. 11 mill.

Hab. in insulis Philippinis.

12. **CYCLOSTOMA (LEPTOPOMA) REGULARE**, Pfr. *C. testa angustissimè perforata, conicâ, globosâ, tenui, lineis approximatis supernè æqualibus sculptâ, interstitiis spiraliter confertim striata, diaphanâ, albida, maculis fulvidis regulariter tessellata; spirâ turbinata, apice acuta, pallidè corned, anfractibus $5\frac{1}{2}$, convexiusculis, ultimo convexitore, infra liram periphericam inflato, obsoletius lirato; aperturâ obliquâ, lunato-circulari; peristomate interrupto, tenui, albo, breviter patente, margine columellari basi subangulatim dilatato. Operculum?*

Diam. maj. $12\frac{1}{2}$, min. 10, alt. 10 mill.

13. **CYCLOSTOMA (LEPTOPOMA) SERICATUM**, Pfr. *C. testa perforata, globoso-conicâ, tenui, pellucidâ, sericet, lineis obliquis, subdistuntibus sculptâ, supernè lineis 4-5 elevatis, spiralibus munitâ, hyalino-albida, liris corneis (vel undique violaceoscenti-fulva, basi pallidiore); spirâ turbinata, acuta, apice nigricante; anfractibus 5, superis parum convexis, ultimo inflato, subcarinato, infra carinam fasciatâ unicâ castaneâ ornato, basi liris spiralibus non-nullis obsoletioribus sculpto; umbilico angustissimo, non pervio; aperturâ parum obliquâ, subemarginato-circulari; peristomate simplice, interrupto, tenui, horizontaliter patente, margine columellari medio sublingulatim dilatato.—Operculum?*

Diam. maj. 12, min. vix 10, alt. 9 mill.

Hab. in insulâ Borneo (Taylor).

14. CYCLOSTOMA PLEUROPHORUM, Pfr. *C. testd umbilicatd, globoso-turbinata, tenui, longitudinaliter confertè striatd et costulis filaribus, prominentioribus sculptd, diaphand, parum nitidá, albido-fulvescente; spird turbinatd, apice acutiusculd, corned; suturd costis denticulatd; anfractibus 5, convexis, ultimo subterete, anticè breviter soluto; umbilico mediocri, profundo, angulo cariniformi cincto; aperturá subverticali, ovato-subcirculari; peristomate continuo, simplice, recto, margine columellari expansiusculo.* — *Operculum duplex, lamina extera testacea, 5-spiratd, marginibus anfractuum liberis, internd pland, cartilaginea.*

Diam. maj. 11, min. $9\frac{2}{3}$, alt. $9\frac{2}{3}$ mill.

Hab. Honduras.

15. CYCLOSTOMA FASCICULARE, Pfr. *C. testd perforatd, acuminato-ovatd, soliduld, confertissimè costulato-striatd, vix sericed, griseo-corned; spird conicá, acutiusculd; suturd costularum fasciculis crenatd; anfractibus 5, convexiusculis, ultimo rotundato, basi spiraliter sulcato; aperturá vix obliqua, ovali; peristomate simplice, recto, acuto.* — *Operculum terminale, testaceum, planum, paucispirum, anfractibus oblique striatis.*

Long. 12, diam. 8 mill.

Hab. —?

16. CYCLOSTOMA GUATEMALENSE, Pfr. *C. testd perforatd, oblonga, solidula, subtruncatd, striatula, olivaceo-fusced; spird convexiusculo-turritd; anfractibus 6, parum convexis, ultimo angustiore, anticè descendente, breviter soluto, basi, circa perforationem apertam, compresso, nec carinato; aperturā verticali, subcirculari; peristomate libero, albo, duplice: interno continuo, vix porrecto, externo dilatato, horizontaliter expanso, supra perforationem exciso.* — *Operculum?* 934.1954

Long. 24, diam. 8 mill.

Hab. Vera Paz in Guatimala.

17. CYCLOSTOMA CANESCENS, Pfr. *C. testd subperforatd, oblongo-turritd, truncatula, solidula, lineis longitudinalibus et spiralibus elevatis regulariter clathratd, parum nitidá, griseo-albida; spird elongatd; suturá tuberculis confertis, albis crenatd; anfractibus superstomate 7, vix convexiusculis, ultimo basi attenuato, circa perforationem obsoletam distinctius spiraliter sulcato; aperturā verticali, angulato-ovali, intus fusco-carned; peristomate duplice: interno vix porrecto, externo undique breviter expanso, supernè angulato, anfractui penultimo breviter adnato.* — *Operculum?*

Long. 20, diam. 7 mill.

Hab. —?

18. CYCLOSTOMA VIOLENCEUM, Pfr. *C. testd subobtectè perforatd, ovato-turritd, truncatd, solidula, lineis elevatis spiralibus et confertioribus longitudinalibus oblongo-granulatd, haud scabrd, non nitente, saturatè violacea; spird turritd, truncatd; anfractibus superstomate $4\frac{1}{2}$, convexis, ultimo rotundato; aperturā subverticali,*

ovali; peristome simple, albo, continuo, margine dextro sub-incrassato, angustè angulatim patente, columellari in laminam sinuosam, perforationem occultantem, nec claudentem, dilatato.— Operculum immersum, testaceum, planum, cinereum, paucispirum.
Long. 20, diam. 11 mill.
Hab. —?

19. **CYCLOSTOMA SHUTTLEWORTHI**, Pfr. *C. testa clausa umbilicata, oblonga, truncata, spiraliter confertim plicata, lineis longitudinalibus obsoletè decussata, sericea, pallidissime fulvida, fasciis valde interruptis castaneis ornata; spirae oblongae; anfractibus superstomate 3, convexiusculis, ultimo basi rotundato; apertura verticali, angulato-ovali; peristome duplice: interno brevi, expansi scuto, externo late patente, concentricè striato, radiatim plicato et castaneo-radiato, ad columellam exciso, lamina albâ fornicala umbilicum prorsus claudente.—Operculum terminale, cartilagineum, paucispirum, nucleo basali.*

Long. 22, diam. 11½ mill.

Hab. in insula Cubâ.

20. **CYCLOSTOMA RADULA**, Pfr. *C. testa perforata, ovato-oblonga, truncata, tenui, lineis elevatis spiralibus et costis acutis longitudinalibus subtiliter asperato-decussata, pallide cornuta, fasciis angustis, rufis, interruptis ornata, non nitente; spirae sursum attenuata, late truncata; sutura profunda, subsimplice; anfractibus superstomate 4, convexis, ultimo angustiore, rotundato; apertura verticali, circulari; peristome duplice: interno continuo, vix porrecto, externo dilatato, horizontaliter patente, concentricè striato, ad anfractum penultimum subexciso, margine sinistro fibrato-inciso.—Operculum planum, e duabus laminis compositum, externa subtestacea, anfractibus 3½, nucleo subcentrali.*

Long. 14, diam. 7 mill.

Hab. Almendares prope Havana.

21. **CYCLOSTOMA OVATUM**, Pfr. *C. testa obtecta perforata, oblongo-ovata, truncata, tenui, longitudinaliter confertim plicata, sericea, fusco-cornuta, vel pallidissimè cornuta, maculis rufis seriatim dispositis ornata; spirae ovato-conica, truncata; sutura levi, irregulariter tuberculata-crenata; anfractibus superstomate 5, convexiusculis, ultimo paulo angustiore, basi obsoletè spiraliter sulcata; apertura verticali, rotundato-ovali; peristome fuscum, duplice: interno breviter porrecto, externo undique dilatato, campanulato-expanso, radiato-costato, supernè angulatim reflexo, anfractui penultimo longè adnato, perforationem claudente, margine sinistro subauriculato, libero.—Operculum?*

Long. 17½, diam. 8 mill.

Hab. in insula Cubâ.

22. **CYCLOSTOMA GRATELOUPI**, Pfr. *C. testa perforata, oblonga, pupiformi, truncata, tenuiuscula, spiraliter confertim sulcati et costis longitudinalibus, confertis, non interruptis sculpti, diaphanæ,*

parum nitida, corneo-albida, fasciis strigatim interruptis castaneis ornata; spiræ sursum parum attenuata, latè truncata; suturæ levi, crenata: crenis supernè minutis, confertis, in anfractibus ultimis fasciculatim dilatatis, obtusis; anfractibus superstomatæ 4, vix convexiusculis, ultimo anticè breviter soluto, basi rotundato; aperturæ verticali, ovali; peristomate duplice: interno breviter expanso, adnato, externo campanulato-patente, rufo radiato, supernè cucullatum elevato, tum emarginato et anfractui penultimo adnato.—Operculum testaceum, planum, anfractibus 3, marginibus lamelloso-liberis.

Long. 16, diam. 7 mill.

β. *T. minor, crenulis suturæ confertis, acutis.*

Hab. Yucatan, var. β. in Indiâ occidentali.

23. **CYCLOSTOMA HISTRIO**, Pfr. *C. testa profundè rimata, ovato-conicâ, solidiuscula, longitudinaliter confertim plicata, parum nitida, albida, strigis latis obliquis, angulosis, fuscis picta; spiræ elato-conicâ, vix truncatula; suturæ supernè minute denticulata, anfractuum inferiorum subsimple; anfractibus 4½, convexis, ultimo rotundato, basi ultra axin subproducto; aperturæ subobliquâ, subcirculari, intus nitida, fulvida, nebulosa; peristomate lateritio, duplice: interno continuo, latè expanso, appresso, externo latiore, horizontaliter patente, supernè sinuato-angulato, ad anfractum penultimum breviter interrupto.—Operculum?*

Long. 20, diam. 11 mill.

Hab. in insulâ Jamaicâ.

24. **CYCLOSTOMA INTEGRUM**, Pfr. *C. testa perforata, turrita, tenuiuscula, integrâ, lineis obsolete elevatis spiralibus et costulis confertis longitudinalibus (tertia vel quartâ quâvis validiore) subdecussata, fulvida, fasciis interruptis rufis cingulata; spiræ regulariter turrita, apice obtusiuscula; suturæ subconfertè denticulata; anfractibus 7, convexis, 2 primis lavigatis, ultimo rotundato, antrosum breviter soluto, vix descendente, basi rotundato, fasciis 2-3 continuis rufis ornato; aperturæ vix obliquâ, ovali; peristomate subduplicato: interno continuo, adnato, externo patente, supernè subangulato-dilatato, tum emarginato, latere columellari undulato.—Operculum cartilagineum, planum, paucispirum.*

Long. 12, diam. 5 mill.

Hab. in Indiâ occidentali.

25. **CYCLOSTOMA HARPA**, Pfr. *C. testa breviter rimata, oblongo-turrita, tenuiuscula, plicis longitudinalibus chordiformibus subdistantibus munita, cinnamomeo-carnæ, haud nitente, lineis rufis strigatim interruptis ornata; spiræ turrita, integrâ, sursum nigrovioletacea, apice obtusa; suturæ profundâ, plicis prominentibus subcrenata; anfractibus 6, convexis, ultimo rotundato; aperturæ verticali, ovali-subcirculari; peristomate rubello, duplice: interno expansiusculo, appresso, externo undique vix dilatato-patente, anfractui penultimo breviter adnato.—Operculum?*

Long. 12, diam. 6 mill.

Hab. Almendares prope Havana.

26. CYCLOSTOMA PINGUE, Pfr. *C. testa umbilicata, oblongo-turrida, truncata, solidia, liris spiralibus obtusis undulata, striis longitudinalibus confertissimis sculpta, oleoso-micante, cinnamomeo-fusca; sutura profundata, simplice; anfractibus superstomate 4, convexis, regulariter accrescentibus, ultimo rotundato; apertura subverticali, ferè circulari; peristomate albo, duplice: interno expansiusculo, adnato, externo continuo, horizontaliter expanso, anfractui penultimo brevissime adnato, supernè angulato.—Operculum?*

Long. $12\frac{1}{2}$, diam. 6 mill.

Hab. —?

27. CYCLOSTOMA PALLIDUM, Pfr. *C. testa perforata, ovato-turrida, truncata, tenui, lineis elevatis spiralibus et confertissimis longitudinalibus (hic illic irregularibus, subconfluentibus) minutè decussata, pallide cornuta, lineolis rufis interruptis obsoletè picta; sutura profundata, subsimplice; anfractibus superstomate 4, convexis, ultimo rotundato; apertura verticali, ovali-circulari; peristomate duplice, interno albo, porrecto, expansiusculo, externo dilatato, horizontaliter patente, concentricè striato, anfractui penultimo breviter adnato, margine sinistro angustiore.—Operculum terminale, testaceum, anfractibus $3\frac{1}{2}$, obliquè striatis, marginibus subliberis.*

Long. $17\frac{1}{2}$, diam. $8\frac{1}{2}$ mill.

Hab. Almendares prope Havana.

28. CYCLOSTOMA CUMANENSE, Pfr. *C. testa perforata, turrito-oblonga, truncata, tenui, longitudinaliter confertim plicata, sericea, pellucida, corneo-lutescente, maculis castaneis fasciatim dispositis ornata; sutura plicis excurrentibus confertim subcrenata; anfractibus superstomate 5, subconvexis, ultimo basi rotundato, anticè breviter soluto, dorso carinato; apertura subverticali, ovali, supernè subangulata; peristomate libero, simplice, undique vix expanso.—Operculum cartilagineum, planum, paucispirum.*

Long. 15, diam. $7\frac{1}{2}$ mill.

29. CYCLOSTOMA TURRITUM, Pfr. *C. testa subperforata, turrida, truncatula, lineis elevatis spiralibus et longitudinalibus regulariter clathrata, albida, lineolis rufis interruptis cincta; sutura subprofunda, confertim denticulata; anfractibus superstomate 6, convexis, regulariter accrescentibus, ultimo rotundato; apertura verticali, ovali, intus fulvidæ; peristomate subduplice: interno continuo, expansiusculo, externo supernè angulatum dilatato, margine dextro vix patente, columellari et sinistro exciso.—Operculum?*

Long. 16, diam. 7 mill.

Hab. Honduras (Mr. Dyson).

30. CYCLOSTOMA DIAPHANUM, Pfr. *C. testa subperforata, oblongo-turrida, truncata, tenuiuscula, lineis elevatis spiralibus confertis, costulisque illas transgredientibus filaribus confertioribus decussata, diaphana, unicolor albida; spiræ elongatae; sutura irregulariter crenata; anfractibus superstomate $4\frac{1}{2}$, convexis, sub-*

æqualibus, ultimo anticè soluto, dorso carinato, basi rotundato, distinctius spiraliter sulcato; aperturā verticali, angulato-ovali; peristomate subsimplice, continuo, undique breviter expanso.—Operculum?

Long. 12, diam. 5 mill.

Hab. — ?

31. CYCLOSTOMA LUGUBRE, Pfr. *C. testā perforatā, turrito-oblongā, solidā; truncatā, liris obtusis spiralibus, costulisque submembranaceis illas transgradientibus sculptā, fuscā, violaceo-fusco latè unifasciatā; spirā parum attenuatā; suturā confertim et subacutē fasciculato-crenatā; anfractibus superstomate 5, convexiusculis, ultimo anticè breviter soluto, subdescendente, dorso compresso, basi distinctius spiraliter lirato; aperturā verticali, obliquè ovali; peristomate subsimplice, continuo, margine sinistro breviter, reliquis paulò latius expansis, subundulatis.—Operculum?*

Long. 16, diam. ferè 7 mill.

Hab. in insulâ Jamaicâ.

32. CYCLOSTOMA KUSTERI, Pfr. *C. testā perforatā, ovato-turritatā, truncatā, tenui, sulcis spiralibus et costulis longitudinalibus confertis regulariter granulato-reticulatā, vix nitente, diaphana, fusco-cornea, lineis obsoletis rufis interruptis pictā; spirā convexo-turritatā, latè truncatā; suturā profundā, simplice; anfractibus superstomate 4, convexis, ultimo angustiore, rotundato; aperturā subverticali, subcirculari; peristomate duplice: interno breviter expanso, adnato, externo campanulato-expanso, concentricè striato, anticè concavo, rufo-radiato, supernè angulato, ad anfractum penultimum angustato.—Operculum?*

Long. 14, diam. 7 mill.

Hab. Honduras (Mr. Dyson).

33. CYCLOSTOMA TROCHLEA, Pfr. *C. testā perforatā, oblongo-turritatā, truncatā, costis filaribus spiralibus et longitudinalibus subregulariter clathratā, haud nitente, pallidè fuscā, punctis rufis subseriatis variegatā; spirā elongatā, trochleari, latè truncatā; suturā profundā, simplice; anfractibus superstomate 5, per-convexis; aperturā verticali, subcirculari; peristomate duplice: interno vix porrecto, externo horizontaliter expanso, supernè in rostrum recurvatum dilatato, ad anfractum penultimum breviter interrupto, latere sinistro inciso-crenulato.—Operculum?*

Long. 14, diam. 6 mill.

Hab. — ?

34. CYCLOSTOMA ALTERNANS, Pfr. *C. testā mediocriter umbilicatā, conoideo-depressā, tenuiusculā, acutē multiliratā, liris alternis minoribus, haud nitente, subepidermide pallidè lutescente fugace albo; spirā breviter conoideo-elevatā, obtusiusculā; suturā subcanaliculatā; anfractibus 5, convexiusculis, ultimo rotundato; aperturā parum obliquā, subcirculari; peristomate simplice, recto, fusco-limbato, subcontinuo, marginibus ad anfractum penultimum*

callo nitido junctis.—*Oberculum membranaceum, planum, cereum, arctispirum.*

Diam. maj. 20, min. 16, alt. 10 mill.

Hab. Madagascar.

35. **CYCLOSTOMA RUSTICUM**, Pfr. *C. testā latē umbilicatā, depresso, subdiscoideā, solidā, spiraliter confertim liratā, non nitente, sordidē albida, pallide fusculo irregulariter variegatā; spirā parum elevatā, vertice submucronato; anfractibus 4½, convexiusculis, ad suturam subdepressis, ultimo terete, anticē descendente; apertura diagonali, subcirculari, intus carnea; peristomate simplice, breviter expanso, marginibus callo brevi junctis, supero repando.*—*Oberculum?*

Loug. maj. 17½, min. 13½, alt. 7½ mill.

Hab. —?

36. **CYCLOSTOMA PSILOMITUM**, Pfr. *C. testā mediocriter umbilicatā, depresso-conoideā, solidulā, virenti-luteā, vix nitidulā, lineis spiralibus subtilissimis, piloso-elevatis crebris obscurioribus cinctā; spirā breviter conoidea, obtusa; suturā subcanaliculatā; anfractibus 4, convexis, ultimo terete, non descendente; apertura ferè verticali, subcirculari, intus albida; peristomate simplice, acuto, marginibus ferè contiguis, callo brevi junctis.*—*Oberculum?*

Diam. maj. 15, min. 11, alt. 8 mill.

Hab. Venezuela.

37. **CYCLOSTOMA ALATUM**, Pfr. *C. testā latē umbilicatā, conoideo-depressā, solidulā, obliquè confertim et inaequaliter costulatā, vix diaphana, albida, fasciis angustis pallidissime corneis variegatā; spirā brevissime conoidea, acutiuscula; suturā simplice; anfractibus 4, modicè convexis, ultimo subterete, anticē vix descendente, lilaceo-nebuloso; apertura diagonali, subcirculari, intus lilaceo-fuscula; peristomate subduplice, latere dextro et basali connato, expanso, externo supernè alatum dilatato, latere sinistro subreflexo.*—*Oberculum?*

Diam. maj. 16, min. 13, alt. 8 mill.

Hab. S. Yago de Cuba.

38. **CYCLOSTOMA SCALARE**, Pfr. *C. testā angustè umbilicatā, conoidea, solidulā, obliquè striatula, nitidula, corneo-lutea; spirā elata, scalaria, apice acuta; suturā profundā; anfractibus 4½, per-convexis, ultimo terete, anticē subsoluto; apertura obliqua, circulari, intus margaritacea; peristomate simplice, continuo, undique vix expansiusculo.*—*Oberculum?*

Diam. maj. 9, min. 7, alt. 6½ mill.

Hab. in insulis Philippinis.

39. **CYCLOSTOMA (CYCLOPHORUS) LUTESCENS**, Pfr. *C. testā umbilicatā, depresso-conoideā, solidā, obliquè filoso-striatā, sericeā, fusco-lutescente; spirā breviter conoidea, apice acutiuscula; suturā profundā, simplice; anfractibus 4½, convexis, rapide accrescentibus,*

BB 1453

ultimo non descendente; umbilico mediocri, profundo; aperturā vix obliquā, rotundato-ovali; peristomate simplice, recto, acuto, continuo, breviter adnato, supernē vix angulato. —*Operculum membranaceum, pallidē corneum, rectispirum, extus profundē concavum.*

Diam. maj. 20, min. $15\frac{1}{2}$, alt. 12 mill.

Hab. in Brasiliā.

40. CYCLOSTOMA GUTTATUM, Pfr. C. testā umbilicatā, depressd, solidā, glabrā, nitidd, lāte castanē, maculis albis subtriangularibus guttatā; spirā vix elevatā, apice fuscā, submucronatā; anfractibus $4\frac{1}{2}$, convexiusculis, celeriter crescentibus, ad suturam impressam striatulis; umbilico latiusculo, pervio; aperturā parum obliquā, circulari, intus albida; peristomate subduplice: interno vix distinguendo, externo expanso, supernē in linguam brevem, anfractui penultimo adnatam, dilutato. —*Operculum?*

Diam. maj. 19, min. 15, alt. 9 mill.

Hab. —?

41. CYCLOSTOMA IGNESCENS, Pfr. C. testā perforatā, globoso-conicā, tenui, lineis spiralibus subtilissimis confertim sculptā, dia-phand, nitidd, ignescente; spirā turbinatā, obtusiusculā; suturā profundā; anfractibus $4\frac{1}{2}$, convexis, ultimo basi distinctius sulcato; aperturā obliquā, subcirculari; peristomate simplice, expanso, marginibus approximatis, non juncatis. —*Operculum?*

Diam. maj. 14, min. 11, alt. $11\frac{1}{2}$ mill.

Hab. in Novā Hiberniā.

42. CYCLOSTOMA FUSCULUM, Pfr. C. testā angustissime umbilicatā, globoso-conicā, tenui, lineis elevatis spiralibus subconfertis, lirāque periphericā validiore cariniformi sculptā, vix nitidul, unicolorē fuscula, fasciā unicā angustā rufā infra carinam pallidam ornatā; spirā conicā, obtusiusculā; anfractibus 5, convexis, ultimo interdum carinā, secundo superne notato, basi minute spiraliter sulcato; aperturā parum obliquā, rotundato-ovali; peristomate simplice, tenui, undique expansiusculo, marginibus approximatis, non juncatis. —*Operculum testaceum, planum, cinereum, 4-spirum, nucleo subcentrali.*

Diam. maj. $11\frac{1}{2}$, min. $9\frac{1}{2}$, alt. 9 mill.

Hab. —?

43. CYCLOSTOMA CASTANEUM, Pfr. C. testā angustē umbilicata, globoso-conicā, tenui, obliquē striatula et liris subacutis multis sculptā, nitidd, saturatē castanē; spirā elevato-conicā, apice obtusiusculā; anfractibus $4\frac{1}{2}$, angulato-convexis, ultimo liris 6 sub-equalibus, pluribusque minoribus, confertioribus in umbilico munito; aperturā parum obliquā, subcirculari; peristomate simplice, tenui, undique expansiusculo, marginibus approximatis, non juncatis. —*Operculum testaceum, planum, paucispirum, nucleo subcentrali.*

Diam. maj. 11, min. 9, alt. 9 mill.

Hab. in insulā Madagascar.

To this was added the following description of various species of *Helicea*.
